COONEO

Tracked Robot

Bison

The Bison tracked robot features a modular and lightweight design, providing an effective solution for performing multiple tasks such as harvesting, inspection, and transportation in complex terrain.

Application Scenarios

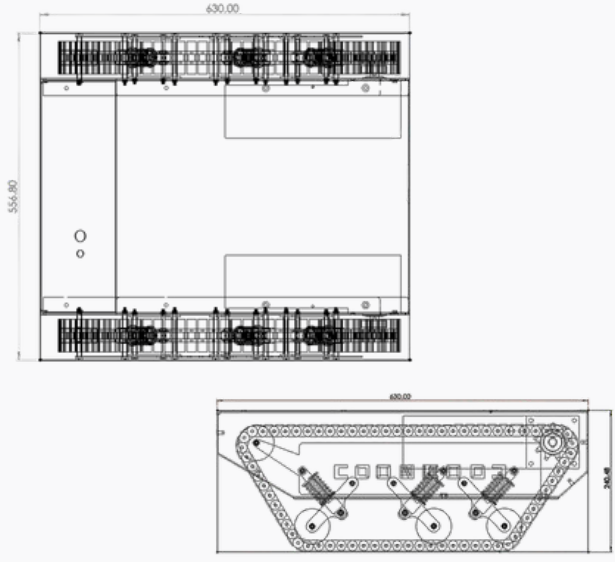

Its tracked structure gives the robot strong terrain adaptability, keeping movement and operation stable on muddy, sandy, and rugged ground. Optional autonomous obstacle-avoidance and driving systems let it plan routes and avoid obstacles without human intervention, ensuring tasks are completed smoothly.

With its high level of intelligence and automation, Bison has broad potential applications in smart harvesting, agricultural monitoring, industrial inspection, and logistics transportation. It can significantly reduce labour costs and improve operational efficiency, making it an ideal solution for modern intelligent operations.

Tracked Robot - Bison

- **Positioning:** Tracked Robot
- **Features:** Equipped with an all-terrain tracked chassis, the robot has low ground pressure and strong traction, providing excellent mobility and stability across challenging terrain such as muddy ground, sandy areas, and steep slopes.
- **Compatible Modules:** Serial/parallel robotic arms, rigid/flexible harvesting grippers, crop protection spray booms, etc.
- **Typical Applications:** Inspection, crop protection, transport, harvesting, etc.

Product Name:	Bison-Tracked Robot
Dimensions:	630.00mm*556.00mm*240.48mm
Weight:	35kg
Maximum Load:	50kg
Maximum Climb Angle:	45 °
Body Material:	Steel, Aluminium
Maximum Speed:	2m/s
Dynamic:	Crawler-type
Power:	24V Lithium Battery
LiDAR:	GPS/RTK/Vision
Camera:	Long-Range Control, Autonomous Control
Navigation:	GPS/RTK/Vision
Control Mode:	Long-Range Control, Autonomous Control
Connectivity:	WiFi/4G/5G
