

COONEO Parallel Robotic Arm

COONEO Parallel Robotic Arm features an ultra-lightweight, low-power, low-noise design suited to small production lines, laboratories, and DIY development. It offers compact AI sorting solutions with in-house stabilisation algorithms and supports customisation for maker projects, teaching and training, and lightweight applications.

Parallel Robotic Arm

No Load Limits | Covers a Wide Range of Applications

The mounting hole is M3, and the spacing between the two parallel rods is 30 mm (connecting components can be attached).

Flexible Adaptation | Easily Switch Between End Effectors

The end effector can be freely replaced, allowing users to switch between different functions such as flexible gripping, rigid gripping, seeding, and cutting with ease.
