COONEO

Tilling/Harvesting Multi-Functional Robot

RoboOX

RoboOX is an intelligent agricultural robot combining high load capacity, four-wheel drive, and autonomous driving. Its compact, modular design allows flexible configuration for different customer needs and scenarios, and it can be fitted with a wide range of agricultural equipment to perform multiple farming tasks.

Application Scenarios

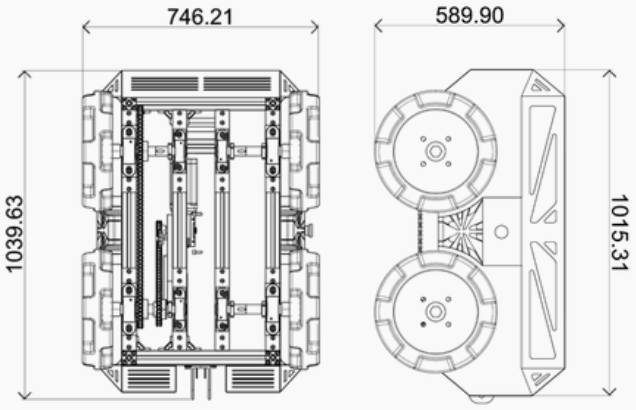

Its high load capacity and and four-wheel drive give it strong terrain adaptability for demanding work, suiting both flat plains and vast hilly and mountainous regions where farm mechanisation remains limited.

Autonomous driving enables round-the-clock operation for higher productivity. Its dual remote control/autonomous navigation modes add versatility and flexibility while ensuring efficient, stable operation to meet diverse farming needs.

Tilling/ Harvesting Multi-functional Robot - RoboOX

- **Positioning:** High load capacity and four-wheel-drive work platform
- **Features:** Equipped with a high-power four-wheel independent drive system and an extra-strong load-bearing structure, it delivers powerful traction and stable support, making it well suited to heavy-duty, long-duration continuous operation.
- **Compatible Modules:** Land preparation system, serial/parallel robotic arms, rigid-flexible harvesting grippers, etc.
- **Typical Applications:** Land preparation, heavy material transport, intelligent harvesting, etc.

Product Name:	RoboOX-Intelligent Agricultural Robot
Dimensions:	749mm*1015.79mm*590mm
Body Material:	Stainless Steel, Aluminium Alloy
Maximum Speed:	2m/s
Dynamic:	Four-wheel Differential
Power:	48V Battery
Motor:	Encoded Reduction Motor
LiDAR	Optional
Camera:	Optional
Navigation:	GPS/RTK/Visual
Control Mode:	Long Distance Control, Autonomous Control
Connectivity:	WiFi/4G/5G
