COONEO

Multi-Functional Intelligent Agricultural Robot

RoboOX mini

RoboOX mini is a compact, precision multi-functional intelligent agricultural robot. It integrates advanced automation technology and artificial intelligence algorithms, and is designed to improve agricultural productivity, product quality, and sustainability.

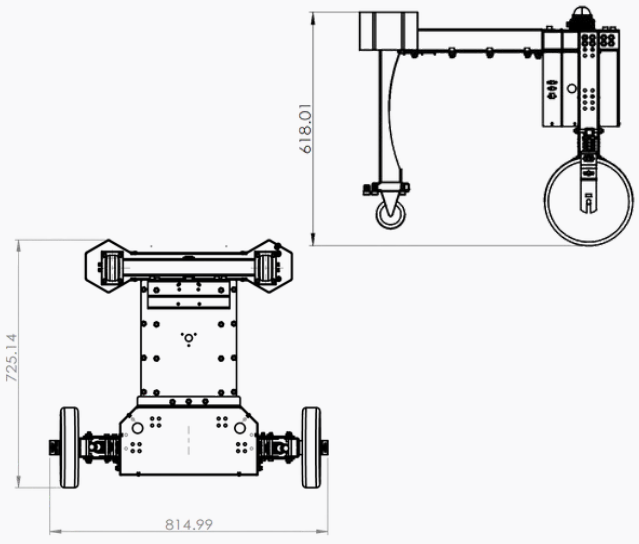

Application Scenarios

RoboOX mini's modular structure allows functional modules and equipment to be swapped to suit different crops and environments. Paired with the company's own robotic arms, grippers, automatic shears, laser weeders, and other components, it can be configured for automated tillage, precision seeding, smart weeding, fruit and vegetable harvesting, and branch pruning, advancing smart agriculture.

Multi-Functional Intelligent Agricultural Robot - RoboOX mini

- **Positioning:** Multi-functional intelligent agriculture robot
- **Features:** As the core platform of the modular system, it supports the rapid connection and interchange of the full range of functional attachments, enabling “multiple applications with a single robot.” It combines precision with cost-effectiveness.
- **Compatible Modules:** Tilling system, seeding system, laser weeder, serial/parallel robotic arms, rigid/soft picking hands, etc.
- **Typical Applications:** Tilling, seeding, mechanical/laser weeding, flowers/fruits/vegetables harvesting, etc.

Product Name:	RoboOX mini-Multi-Functional Smart Agricultural Robot
Dimensions:	725.14mm*814.99mm*618.01mm
Body Material:	Stainless Steel, Aluminum Alloy
Maximum Speed:	2m/s
Dynamic:	Differential Drive
Power:	36V Lithium Battery
Motor:	Hub Motor
LiDAR:	Optional
Camera:	Optional
Navigation:	GPS/RTK/Vision
Control Mode:	Long-Range Remote Control, Autonomous Control
Connectivity:	WiFi/4G/5G
