COONEO

Monitoring/Pruning/Harvesting Multi-Functional Robot

Stier

Stier Monitoring/Pruning/Harvesting Robot is a highly integrated, agile, and efficient agricultural robot, designed to meet the diverse needs of field operations.

Application Scenarios

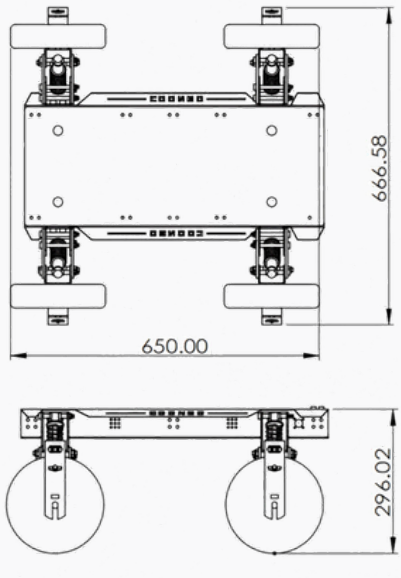

Its lightweight, high-strength aluminium alloy build, combined with four-wheel suspension and in-wheel motors, ensures strong mobility and stability on complex terrain. Stier's modular design supports attachments such as monitoring sensors, pruning tools, and harvesting robotic arms, adapting easily to monitoring, pruning, and harvesting tasks.

Ultra-quiet operation lets it work efficiently in noise-sensitive environments such as greenhouses and orchards. Support for GPS and RTK enables precise outdoor positioning and navigation, further enhancing operational flexibility and stability.

Monitoring/Pruning/Harvesting Multi-Functional Robot - Stier

- **Positioning:** Agile precision-operation platform
- **Features:** The most compact body in the series, with the ability to turn in place. Designed specifically for low canopies and densely planted crop rows, (such as in strawberry greenhouses and grape trellises) it offers excellent manoeuvrability and high operational precision.
- **Compatible Modules:** Serial/parallel robotic arms, rigid/flexible harvesting grippers, etc.
- **Typical Applications:** Close-range monitoring, branch pruning, harvesting, etc.

Product Name:	Stier-Monitoring/Pruning/Harvesting Multi-Functional Robot
Dimensions:	666.58mm*650.00mm*296.02mm
Weight:	30kg
Maximum Load:	50kg
Maximum Climb Angle:	30 °
Body Material:	Steel, Aluminium
Maximum Speed:	2m/s
Dynamic:	Four-wheel / Two-wheel Differential
Power:	36V Lithium Battery
LiDAR:	Optional
Camera:	Optional
Navigation:	GPS/RTK/Vision
Control Mode:	Long-Range Control, Autonomous Control
Connectivity:	WiFi/4G/5G
